Detailed Action

Reasons for Allowance

1. Claims 1-8 are allowed.
2. The following is an examiner's statement of reasons for allowance:

This application is for a floating support structure for a CD player.

- **Claim 1** specifies a floating support structure for a CD player, which requires:

"...a first mounting plate mounted on a first side of the CD changer and a second mounting plate mounted on a second side of the CD changer opposite the first side, ...first and second base plates fixed to a vehicle body and disposed, respectively, on opposite sides of the CD changer, wherein the first and second mounting plates are supported on the first and second base plates, respectively, in a floating manner, a first inner support plate disposed between the first mounting plate and the first base plate, and a second inner support plate disposed between the second mounting plate and the second base plate, a first set of dampers, wherein the first and second mounting plates and the first and second inner support plates are connected to each other, respectively, by the first set of dampers at two front points and two rear points relative to a traveling direction of the vehicle body, wherein the first set of dampers buffer displacement of the first and second mounting plates within a vertical plane relative to first and second inner support plates, a first outer support plate disposed between the first inner support plate and the first base plate, and a second outer support plate disposed between the second inner support plate and the second base plate, wherein the first and second outer support plates are also supported on the first and second base plates, respectively, a second set of dampers, wherein the first and second inner support plates and the first and second outer support plates are connected to each other at two front points and two rear two points relative to the traveling direction of the vehicle body, wherein the second set of dampers buffer displacement of the inner support plates within a vertical plane relative to the outer support plates, and a plurality of suspended springs mounted between the first outer support plate and the first mounting plate and between the second outer support plate and the second mounting plate, wherein the plurality of suspended springs exert spring force which counteracts a weight of the CD changer."

These features, in combination with the other features of Claim 1, are not anticipated by, nor made obvious over, the prior art of record.
